

# Gnana Prakash S

Full Stack Developer | Exploring AI and Scalable System Design

Tenkasi, Tamil Nadu, India

## Profiles

github.com/sgprakas

linkedin.com/in/sgprakas

## Summary

**Full Stack Developer with 4 years of experience** building scalable backend systems and web applications using **TypeScript** and **Node.js**. Skilled in end-to-end development, from designing APIs to deploying production-ready systems. Currently expanding knowledge in AI and modern development practices, with a focus on building practical, intelligent software systems.

## Skills

### Frontend

HTML, CSS, JavaScript, React

### Backend

TypeScript, Node.js, Express/Fastify, Socket.IO, MQTT, MongoDB, MySQL, Redis, Python

### DevOps & Tools

AWS, Docker, CI/CD, Git, Mocha

### AI Interests

Prompt engineering, LLM Integration, Agent Design

## Experience

### The Top-class Entertainment LLP - Audio/Video Streaming Company

August 2022 - Present

Full Stack Developer

Coimbatore, Tamil Nadu, India

- Led a team of 4 developers to build and maintain internal platforms for a talent-based media streaming product.
- Rebuilt a legacy CMS into a scalable microservices-based system, improving maintainability and modularity.
- Developed backend APIs for both the CMS and mobile-facing application using TypeScript and Fastify.
- Implemented CI/CD pipelines and containerized services using Docker to enhance release reliability and development speed.
- Collaborated with design and QA to deliver stable releases and reduce post-deployment issues.

### Key Projects:

- CMS and App Backend:** Migrated monolithic CMS to microservices; built APIs for admin tools and mobile app integration.
- Real-Time Multiplayer Game:** Built a browser-based game using Phaser.js and Socket.io to boost user engagement.

### Leora Solutions LLC - Web Hosting & IT Consulting

July 2021 - July 2022

Full Stack Developer

Palakkad, Kerala, India

- Built scalable backend APIs using TypeScript and Python with REST and GraphQL, enabling reliable data access for client platforms.
- Designed and implemented a GraphQL schema that reduced over-fetching by 40% and improved performance.
- Worked on end-to-end delivery of small-scale projects including an e-commerce platform and a patient management system.

## Projects

### GPflow - Workflow Automation (Personal) (In Progress)

Building a TypeScript-based DevOps automation platform to simplify infrastructure workflows, designed with clean OOP, scoped execution, and local secret management.

https://github.com/gpmindset/gpflow

- Structured task execution system under active development, designed with extensible patterns and planned support for remote environments.
- Aims to simplify DevOps workflows by automating repetitive tasks and supporting scalable execution, with future support for AI-driven task generation.

## Education

### Karpagam College of Engineering

August 2018 - March 2022

Coimbatore, Tamil Nadu, India

B.Tech - Information Technology

## Languages

### Tamil

Native

### English

Proficient
